

Greening the campus has become an important issue in recent years as the need to reduce the impact of human activities on the environment has become more pressing. In this regard, various institutional initiatives have been implemented to make the campus more environmentally friendly and sustainable.

**Restricted entry of automobiles:** This initiative involves limiting the number of vehicles entering the campus, with the aim of reducing air pollution and carbon emissions. This is done by encouraging the use of public transportation, carpooling, or non-motorized modes of transportation like cycling. Designated parking areas are available outside the campus.

**Use of bicycles/ Battery-powered vehicles:** Encouraging the use of bicycles or battery-powered vehicles on campus can significantly reduce the carbon footprint of the institution. Bicycles or e-bikes are considered eco-friendly and are a healthy mode of transportation. The campus provides dedicated parking areas for bicycles, which makes it easier for students, staff, and visitors to use them.

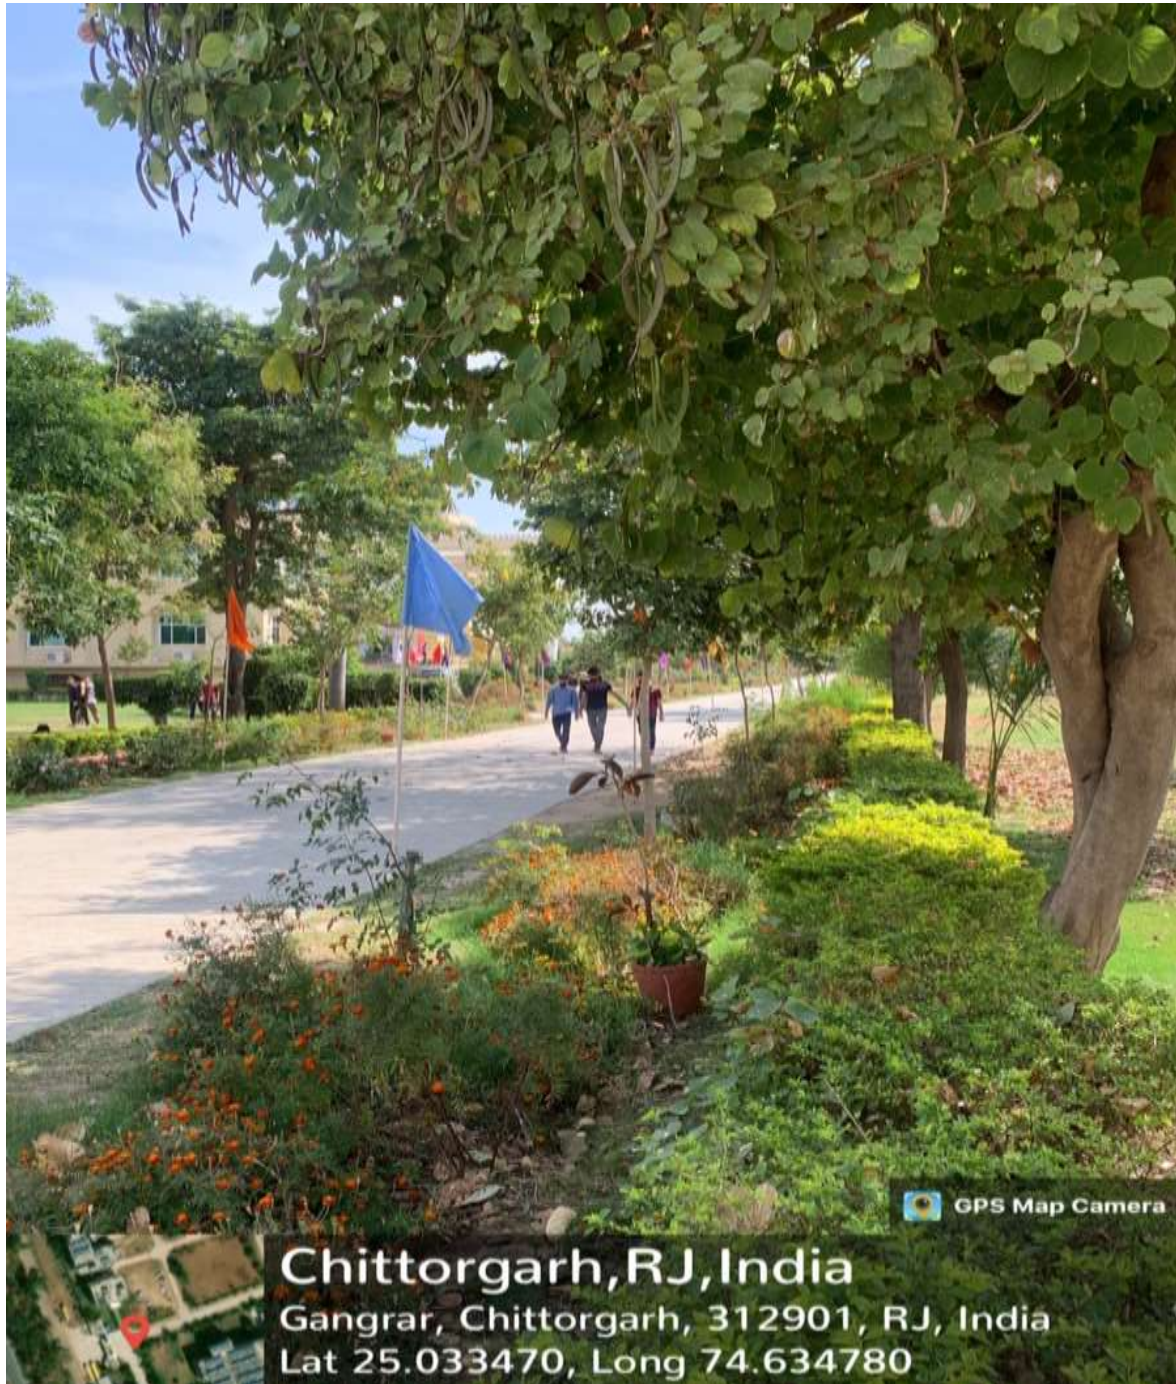

**Pedestrian-friendly pathways:** Creating pedestrian-friendly pathways can encourage people to walk instead of using vehicles. This helps to reduce air pollution and traffic congestion, making the campus a more enjoyable place to be. This has been achieved by installing benches and shade trees.

**Ban on use of plastic:** Plastic waste is a major environmental concern, and Mewar university has taken a lead in reducing its impact by banning single-use plastics on campus. This includes water bottles, shopping bags, and food packaging, disposable coffee cups, etc., which can be replaced with reusable alternatives. The campus provides reusable containers, biodegradable products, and recycling bins to encourage people to reduce their waste.

**Landscaping:** Institutional initiatives for greening the campus can also include landscaping efforts to improve the local environment. This has been achieved by planting more trees, shrubs, and flowers, and creating green spaces and gardens. This enhances the aesthetic value of the campus and provides a healthier environment for the students, staff, and visitors with improved air quality, reduced noise pollution, and increased biodiversity.

In conclusion, these institutional initiatives for greening the campus have been implemented to make the campus more environmentally friendly and sustainable. These measures have been successful in reducing the carbon footprint of the campus, making it more accessible, and enhancing its aesthetic value.
